

- Compares and synchronizes all aspects of your SQL Server database:
 - Server properties
 - Database objects
 - Schema information
 - Table data
- Saves comparisons to source code control systems
- Supports development in a team or individual environment
- Rapidly pushes changes from one database to another

CompareRocket™ for Visual Studio

Rapidly Compare and Synchronize All Aspects of Your SQL Server Database

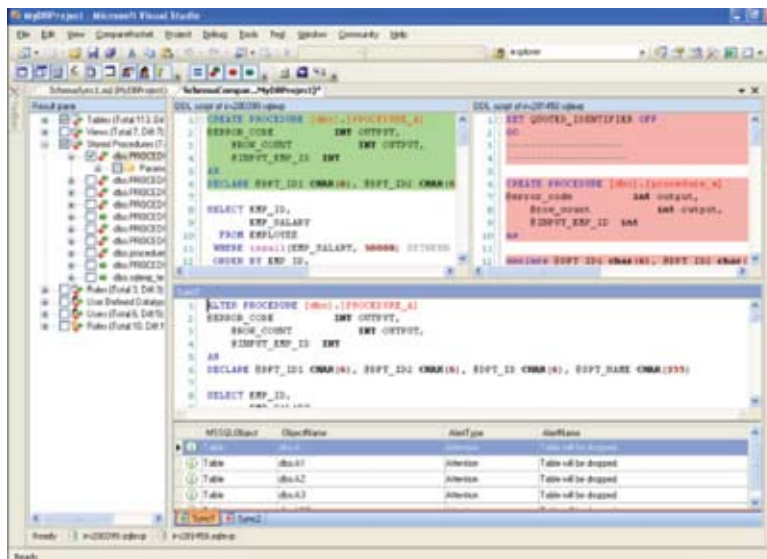

Visual Studio data developers can only find and migrate SQL Server objects, server properties and table data through disparate tools and manual processes. When working as a team or individually, developers need to be able to easily compare, synchronize and store database changes.

With CompareRocket for Visual Studio from Quest Software, you can compare and synchronize database objects, server properties and data from a single tool within Visual Studio. You can also store comparisons into your source code control system to ensure the integrity of team development efforts.

- Automatically compares and synchronizes database objects, server properties and table data
- Rapidly pushes database changes from one environment to another
- Supports development in an individual or team environment
- Easily stores comparisons in source code control systems
- Saves time and reduces issues associated with implementation of projects
- Compares and synchronizes regardless of database size

Compare

Perform comparisons of any area of your SQL Server databases including SQL Server properties, database objects and schema data, as well as table data for all encompassing compare needs. Save time and improve your productivity by removing the headaches of using separate tools for each type of comparison.

Compare and synchronize all aspects of your database with CompareRocket

System Requirements

- Microsoft Visual Studio.NET 2003
- Microsoft Visual Studio 2005
- SQL Server 2000
- SQL Server 2005
- Disk: 40MB free space
- Memory: 256MB
- Operating System: Microsoft Windows Platform

Platforms not supported are XP Home Edition, XP Media Center Edition and XP Tablet PC Edition

Synchronize

Rapidly synchronize your database environments instead of relying on SQL scripts or individual tools. Automatically synchronize all aspects of SQL Server databases to speed up database changes and maximize time to develop and implement Visual Studio projects.

Source Code Control

Store comparisons to any source code control system to enforce source code control integrity and assure that code changes are auditable.
